
Software Engineer - .NET

WHAT YOU WILL WORK ON

- Design and develop rich user-focused business applications and large enterprise systems.
- Work on cutting edge technology with some of the world's most exciting projects and companies.
- Work with end-user and engineering staff to understand their needs and vision; use this knowledge to create state-of-the-art software.

RESPONSIBILITIES

- Participate in requirements analysis and develop solutions for all tiers of applications: user interface, middle-tier business components, database layer, etc.
- Be a key contributor to innovation and build proof of concept examples that can be leveraged across current and future software release versions.
- Work independently and/or in small teams.

WHAT WE'RE LOOKING FOR

- You are restless, curious and creative.
- You are a quick learner and are always working on and learning about the next big thing on the horizon.
- You have a strong computer science foundation and are passionate about web development.
- You have worked on several projects and have done your own little side projects.
- You are a familiar name on Stackoverflow and Github and have a few open source projects on your resume.
- You already have several years of experience as a web application developer – in one or more languages, such as Ruby, PHP, etc.
- Excellent knowledge of Ajax/JavaScript is essential - you don't need to know every library, but you have to have a solid grasp of the raw language
- While you don't have to be an SQL or database expert, familiarity and a basic comfort level with database back ends is expected.
- Solid knowledge of web and http is critical and you know HTML5 and CSS3 inside out.
- Familiarity with REST services and KnockoutJS are not critical but a plus.
- Your strong coding skills in one or more language (C#, Ruby, Java, Python, Django, PHP, C++, Obj-C, etc.) have already been proven in several large projects.
- Work on various ASP.NET MVC 4 applications

REQUIREMENTS

- BS in computer science or equivalent work experience
- Strong knowledge of the .NET framework (C#) and associated technologies
- Experience with Web Services (WCF)
- Experience working with Agile (Scrum) project team development environments is preferred
- Good fundamental and hands on knowledge of MS SQL Server 2008 R2
- Strong analytical skills and good problem solving skills
- Excellent verbal and written communication skills
- Good knowledge of project life cycles and the ability to work in small team environments.

WHERE YOU WILL WORK

- We are based in Santa Monica, and you will be working mostly at client sites here in Los Angeles on the West Side, close to world famous beaches, entertainment and young like-minded people.
- If you are not in Southern California and don't mind travel, we are still interested in you joining us, as long as you don't mind alternating between on-site and off-site work, usually 2 weeks on-site and 2 weeks remote.
- We provide all travel, lodging and expenses for remote employees.
