
Senior Oracle SOA Developer

Position Type:	Contract, Contract to Perm, Permanent
Location:	US East Coast
Work Environment/Location:	Remote and on-site (varies)
Number of Openings:	1
Timing:	immediately

The Senior Oracle SOA Developer will participate and/or lead Oracle Fusion Middleware projects. His/her responsibilities will include research, design, development and documentation of projects and software specifications throughout the software development life cycle.

Responsibilities:

- Collaborate with business analysts, business users and external systems integrators in conceptualization and development of new technical objects to support Oracle ERP integrations.
- Evaluate requirements from functional specifications and create efficient technical integration designs.
- Analyze, evaluate and support impact of Oracle release upgrades in existing integrations.
- Adhere to and support the use of IS standards for code development and code promotion.
- Develop complex technical objects in accordance with best practices.
- Mitigate significant risks associated with integration projects, which have a high technical complexity and/or involve significant challenges.
- Gather business requirements and recommend industry best practices and work with functional knowledge holders.
- Design, develop, deploy, test and maintain technical objects that exist in Oracle SOA production environments, e.g., web services, system designs and integrations.
- Design and develop ESB/BPEL processes (Synchronous and Asynchronous).
- Design and development of web services.
- Create process flows, high level functional and detailed technical design specifications from business requirements.

Required Experience:

- 5+ years progressively responsible for building java applications and system integrations.
- 2+ years of Experience with SOA technology design and implementation experience.
- Application extensions and middleware experience.
- Integration experience with any Enterprise Service Bus (such as TIBCO, IBM, Oracle).
- Experience with SoapUI or similar web service testing tools.
- Experience with SOA principles, design patterns, application integration architectures.
- Experience with building, configuring and deploying services on containers such as web logic and other application servers.
- Experience with BPEL/BPM.
- Experience with J2EE based development.
- Ability to define and maintain a common interface schema.

Preferred Qualifications and Skills:

- Oracle Application Development Framework Experience.
- Oracle Middleware Experience
- Web Center composite applications.
- Experience with Oracle SOA Suite.
- Experience in working with version control and software configuration management tools including Subversion, CVS, HP Project and Portfolio Management (PPM).
- Oracle Certification
